

operation name: **Implementing embedded systems in industrial PCs**

operation summary: In the context of the project, the following advantages are pursued at the Datafox-IPCs by implementation of embedded systems and sensors for data acquisition:

- Ensuring data acquisition even in a failure of the PC unit.
- Implementation of new detection technologies from the industrial sector.
- Increasing data security.
- Implementation of an online and offline access control system.
- Improving the data security mechanisms through identification procedures, login procedures, biometrics,

total eligible expenditure (ESF): 36.000,00 EUR

operation start and end date: 16.07.2016 – 15.07.2018

beneficiary name: Datafox GmbH
